Personal Information

Title: Engineering Manager - Backend & Distributed Systems

Professional Summary

Senior Development Lead (Engineering Manager) leading 4+ engineering teams across payments, IoT, and SaaS. Owns **hiring, roadmap, OKRs**, and **delivery** for a 15 engineer organization, while shaping architecture for high-scale platforms and security-critical products. Built zero-downtime systems, delivered 5+ greenfield products, achieved 20%+ improvement in delivery speed, and strengthened team performance through onboarding, coaching, and engineering standards.

Skills

Technical Skills: Java, Spring Boot, Kafka, Kubernetes, Terraform, Apache Camel

Engineering Leadership: Hiring strategy, Roadmap planning, OKR management, Delivery management, Mentorship & coaching

Systems & Reliability: Microservices architecture, Distributed systems, Event-driven architecture, Observability engineering, Application security

Leadership & Operations: Headcount planning, Performance management, Succession planning, Executive communication

Strategy & Execution: Cross-functional alignment, Technical strategy, Dependency management, Engineering metrics, Change management

Work Experience

Senior Development Lead (Engineering Manager), 03/2021 to 02/2026

Girmiti Software – Bengaluru

- Owned hiring, roadmap planning, OKRs, and delivery for four engineering teams, spanning payments, IoT, and SaaS with **15 engineers**.
- Designed and led the greenfield Attestation & Monitoring service, building the fraud-prevention product and hiring **7-8 Java/React engineers**.

- Shipped cryptographic device attestation across **tens of thousands of mPOS devices**, blocking **10,000+ fraudulent transactions** and flagging compromised devices.
- Owned the Apache Camel and Kafka bank-integration layer across **12 banks** for NPCI's dispute platform, processing **10B+ transactions/month** at **99.99% availability**.
- Led zero-downtime migration from synchronous REST to Kafka event pipelines on Kubernetes across **3 global regions**, plus Postgres schema migration.
- Grew and retained a **15-person org** at **95%+ retention** over four years, promoted **3 ICs** into lead roles, and cut ramp time from **6 weeks to 3**.
- Rolled out GitHub Copilot and Gemini to **40+ engineers**, tracked DORA and SPACE baselines, raised delivery velocity **20%**, and cut integration defects **25%**.

Senior Software Engineer / Technical Lead, 08/2019 to 03/2021

Quest Global – Bengaluru

- Led partner verification microservices delivery with layered testing and SonarQube CI gates, maintaining zero critical bugs over 8 months.
- Reduced deployment cycle time by **35%** by introducing Jenkins and GitHub Actions CI/CD pipelines.
- Built internal HR interview-scheduling tooling and an onboarding portal integrated with background-verification systems.
- Applied Java and Spring Boot to extend service workflows, aligning backend delivery with partner verification needs.
- Used Kafka and Kubernetes to support event-driven services and deployment reliability across delivery pipelines.
- Extended Terraform practices for repeatable infrastructure changes while supporting observability and application security priorities.

Software Engineer, 04/2018 to 08/2019

Collabera – Bengaluru

- Migrated Apple's Compact Rebate Tool from a Java monolith to 12 Spring Boot microservices using a strangler-fig pattern.
- Executed a shadow-mode cutover with zero incidents over 8 months, validating service stability before full release.
- Reduced **p95 latency 25%** through composite indexing and targeted query rewrites.
- Improved data access patterns by tightening database queries and index usage across the migrated service stack.

Java Developer, 04/2013 to 03/2018

Inerun – India

- Built backend services for the 5Ways courier platform, supporting **100K+ concurrent users**.
- Developed REST APIs for the Youdare real-time gaming app using Java and Spring Boot.

- Implemented asynchronous fan-out to support event-driven processing in the Youdare platform.
- Designed a Redis-based leaderboard to support live game state and fast ranking updates.
- Applied Kafka patterns to move data between services more reliably in real-time workflows.

EXPERIENCE

Recognized company-wide for the product's security impact and delivery quality, Awarded Employee of the Quarter (Q4 2020) and the On the Fly Award (2020)

Education

Master of Computer Applications: Computer Applications Development, 03/2013
Sikkim Manipal University - India

Certifications

AWS Generative AI Developer (AIP-C01)

System Design: Requirement to Release, Learning Course

(ISC) Certified in Cybersecurity (CC)

Google Cloud Level 1

AWS Cloud Practitioner

Best Practices for New People Leaders, LinkedIn Learning / PMI REP, Jan 2026
